

Professional experience

2025-present Senior software engineer @ Alice&Bob — Permanent, +1 year

- **Project lead - first deployment of a quantum chip at a customer site:** Definition of the architecture; Integration of our legacy stack into the customer's HPC stack; Containerization of our python modules;
- **Technical lead of the team in charge of the quantum chip control framework:** Gathering requirements from physicists; Prioritization of the team's activities; Implementation of features in the experimental framework
- **Lead of the evaluation of DataDog tools** LogManagement, Real-User Monitoring, Product Analytics
- **Intern supervision** Migration project of 70 physical measurement classes

Technical environment:

- Python3, Gitlab CI
- Infrac-As-Code: Terraform, Ansible, docker
- DB: Postgres, Elasticsearch

2019–2024 Senior software engineer @ Dashlane — Permanent, +5 years

- **Technical lead of “feature” teams:** Creation of our roadmaps, collaboration with manager and PM, distribution and tracking of tasks, mentoring of junior engineers, work on the complex topics
- **Setup and maintenance of an unmanaged Elasticsearch cluster** (23 nodes, 32TB, ~500M logs/day): The cluster is today used by all of Dashlane's engineering teams and serves as the foundation of our in-house monitoring and alerting system.
- **Migration of our Mysql RDS database** between 2 AWS accounts for better access separation, upgrade of the major Mysql version and enabling of database encryption while minimizing downtime for the 4 application components using this database.
- **Redesign of our in-house Feature Flip engine:** Redesign of the evaluation and caching mechanisms to support +10M feature evaluations per day and redesign of the backoffice web interface
- **Server team on-call:** Intervention and resolution of production incidents
 - Regular “ops” tasks: Administration of EC2 instances, ECS containers and their VPC, creation of docker/AMI images, responses to security team requests, fixing of hackerOne bugs
- **Explorer program mentor:** 2 years of mentoring several members of our user support and QA teams to enable them to successfully join the server team as junior developers.
- **Server team recruitment:** Interviewed +150 candidates across 2 interview types: “Problem solving” and “Deep tech”
 - Author of the exercise used by all of Dashlane's engineering teams as the problem solving interview.
- **“Guild lead” of the server team:** Organization and tracking of projects transverse to all team members, notably the migration of +80 legacy endpoints to a new framework by 20 engineers.

Technical environment:

- NodeJS+Typescript, Gitlab CI
- Infrac-As-Code: Terraform, Ansible, docker
- AWS Cloud: EC2, ECS, S3, RDS, SNS, SQS, ECR, Cloudwatch, ElastiCache
- DB: Mysql RDS, Redis, Elasticsearch

2016–2019 Consultant @ Nexworld — Permanent, 3 years

- **Full Stack developer, Elis, 2 years**
 - Implementation and maintenance of Elis' quote creation and sales commission system.
 - Java backend development (Spring/Hibernate/Maven), frontend (Cordova/AngularJS) and desktop (NW.js/AngularJS)
 - Onboarding and training of new developers in the team
- **API Management consultant, Sanofi, Engie, Caisse d'épargne, 1 year**

Technical environment:

- Java (Spring/Hibernate); Javascript
- Self-hosted servers: CentOS, Shell Scripting
- DB: PostgreSQL

Education

2016 Computer science engineering degree — Software Engineering major
Efrei, engineering school in computer science and digital technologies (Villejuif, 94)
